

Bounded Codex task

Outcome

Design root and nested instructions, then verify that a task applies the nearest rule without conflicting with repository policy.

Task prompt

Modify the API fixture under its nearest instructions. Explain which rules apply before editing and verify compliance after the patch.

Constraints

- Work only in the learner copy inside this lab.
- Preserve public behavior unless the task explicitly changes it.
- Do not change expected tests to force a pass.
- Do not access the network, external accounts, credentials or personal data.

Definition of done

The trace distinguishes root and nested rules and the patch complies with both in the correct precedence.
