

Bounded Codex task

Outcome

Compare read-only, workspace-write and approval boundaries using safe commands and an explicit consequence matrix.

Task prompt

Probe only the supplied lab paths. Do not alter files outside the lab. Explain every boundary and record whether the action was allowed, blocked or approved.

Constraints

- Work only in the learner copy inside this lab.
- Preserve public behavior unless the task explicitly changes it.
- Do not change expected tests to force a pass.
- Do not access the network, external accounts, credentials or personal data.

Definition of done

The log contains safe probes for three permission cases and a least-privilege recommendation supported by results.
