

Lab 17 — A Multi-Agent Content Studio

Agentic AI Applications with Codex · Day 2 · Codex (subagents + the Lab 16 skills)

Course: Agentic AI Applications with Codex (C695)

Day 2 · Topic 5 · about 55 minutes · slides 150–154

Surface: Codex (subagents + the Lab 16 skills)

Features: agents described in the prompt · subagents in parallel · the Lab 16 skills · a reviewer

The story so far

Grace wants to post every day and start a YouTube channel, with no marketing staff. Set up a studio of five specialist agents that use her new marketing skills to plan, write, design and script a week of content — with a reviewer that catches mistakes.

Your goal

One agent writing everything produces one voice and no second opinion. Five specialists — with a reviewer at the end — produce a week of content fast and safely. You set them up in plain words, not config files.

You'll build

content/week-01/: 7 posts, images, a YouTube video package and a review log

What is in this folder

- assets/studio-roles.md
- assets/post-performance.csv
- assets/content-pillars.md
- assets/youtube-brief.md
- assets/courses.csv
- prompts.md / prompts.pdf — every prompt, ready to paste
- evidence/checklist.md — what to capture as proof

Step by step

1. **Open the project** — Use the cookbake-marketing project from Lab 16, with its four marketing skills installed. Copy the assets into it.
2. **Meet the team** — Paste Prompt A. It describes the five agents in plain words (longer notes: studio-roles.md). Codex confirms each role in one line.
3. **Run the studio** — Paste Prompt B. Codex starts the agents as subagents — watch them move from Active to Done in the Subagents panel.
4. **Look inside** — Click two finished agents to see what each one did and the summary it sent back.

5. **Read the review** — The brand reviewer must flag at least one problem. Confirm it was fixed.
6. **Make the video** — Film the shot list on a phone in the kitchen, or cut the \$imagegen storyboard frames with a voice-over in any video editor.
7. **Stage, do not publish** — Posts stay as files for a person to schedule.

The prompts

PROMPT A — meet the team

We are running a content studio with five agents. Here is the team — do not start yet.

1. Strategist: reads post-performance.csv and content-pillars.md, then plans 7 posts and one YouTube video for next week.
2. Copywriter: writes the 7 posts with \$social-post, in our \$brand-voice.
3. Visual director: makes one image per post with \$imagegen, on brand.
4. Video producer: writes the YouTube package with \$youtube-package and youtube-brief.md, plus a 30-second Short.
5. Brand reviewer: checks everything against courses.csv. It reports problems; it does not edit.

Rules for everyone: every fee and date comes from courses.csv. Publish nothing.
Reply with one line per agent to confirm.

PROMPT B — run the studio

Now run the studio, using subagents.

- First, the strategist makes the plan.
- Then the copywriter, visual director and video producer work in parallel, each as its own subagent.
- Last, the brand reviewer checks it all.

Send each problem back to fix.

Save to content/week-01/ with a review log, then give me a short summary.

Check your work

- ☐ Codex confirmed all five roles before starting.
- ☐ Five subagents ran; you opened at least two in the Subagents panel.
- ☐ The strategist's plan cites what performed best.
- ☐ content/week-01/ holds 7 posts, 7 images and the video package.
- ☐ The reviewer logged at least one issue, and it was fixed.

- ☐ Every fee and date matches courses.csv, and nothing was published.

If it goes wrong

- **Codex did it all in one agent** — Ask directly: "use subagents — one per role". Codex delegates when you ask.
- **Slow or costly** — Every subagent uses its own tokens. Split only work that is truly independent.

Stretch

- Add a sixth agent in plain words: a community manager who drafts replies to the 5 most likely comments.
- Reuse the team every week: copy the five roles into AGENTS.md, then just say "run the content studio".

Why it matters: Sora is discontinued. Film the shot list, or cut \$imagegen frames with a voice-over.

Next

Lab 18 — Lead Magnet, Newsletter and the Open-House Campaign. Keep what you built — the next lab starts from it.

Safety

Use only this lab's synthetic data and your own accounts. Never paste a real API key, password or personal data into a prompt or a file. Every email address in the data must resolve to your own inbox. Nothing is published or sent without your explicit approval.
